

2025 New Energy Storage Batteries

Overview

A report by global research and consultancy firm WoodMackenzie, published in January, identified five major trends that are expected to define this sector in 2025, creating new opportunities across the energy landscape. **Battery Storage Costs Have Reached Economic Viability Across All Market Segments:** With lithium-ion battery pack prices falling to a record low of \$115 per kWh in 2024—an 82% decline over the past decade—energy storage has crossed the threshold of economic competitiveness. Utility-scale systems now. Demand for energy storage continues to escalate, the global battery energy storage (BESS) landscape is poised for significant installation growth and technological advancements.

2025 New Energy Storage Batteries

Future of energy storage: 7 Powerful Trends in 2025

In 2023 alone, global battery storage additions reached 42 GW--more than double the previous year's installations. Looking ahead, experts predict 80 GW of new additions in 2025, ...

Solar, battery storage to lead new U.S. generating capacity additions

Battery storage. In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

Battery storage boomed last year, and there's more to come in 2025

Better yet, recent projections from the EIA forecast 18.2 GW of new utility-scale battery storage in 2025. Even without residential or commercial storage projects, this would be enough to set ...
