

# 2025 Photovoltaic Energy Storage

## Overview

---

Almost half of all global solar capacity will be co-located with storage by 2060, compared to around 2% today, a new report published by DNV predicts. and 602 GW dc of PV were added globally, bringing the cumulative installed capacity to 2. The rest of the world was up 11% y/y. • The IEA reported Pakistan's rapid rise to fourth place in annual. Despite an increase in battery metal costs, global average prices for battery storage systems continued to tumble in 2025. Factors driving the decline include cell manufacturing overcapacity, economies of scale, low metal and component prices, adoption of lower-cost lithium-iron-phosphate (LFP). We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48. It's for anyone who wants cleaner energy, lower bills, and a backup plan when Mother Nature throws a tantrum. Think of it as the Swiss Army knife of modern power solutions. Utility-scale systems now.

## 2025 Photovoltaic Energy Storage

---

### U.S. energy storage market sees record growth in Q1 2025

The U.S. utility-scale energy storage market led the way, adding 1.5 GW/4 GWh of capacity in Q1 2025 for a 57% increase over the same period last year. The residential storage ...
