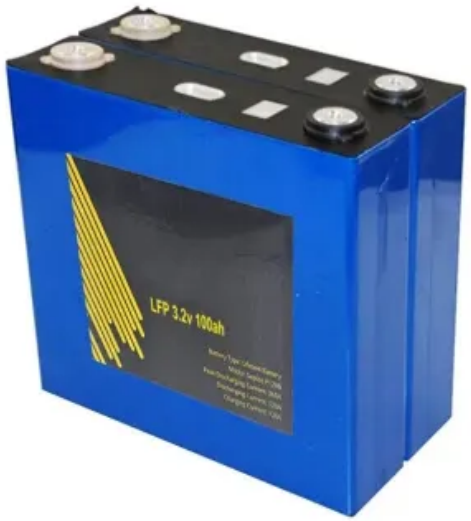
Agriculture and fishery photovoltaic solar power generation project



Overview

An ambitious fishery-solar farm hybrid in China is now fully connected to the grid. The project combines a 250 MW solar farm with a fishery. Beijing-based company Dajin Heavy Industry claims the project represents an extremely efficient land utilization. In a social media post, the company said its. Driven by the global energy transition and the green development of agriculture, the agricultural - photovoltaic complementary model is emerging as a new engine for the coordinated economic and ecological development of rural areas. As climate change. Fish farmers are beginning to deploy floating solar panels at their facilities, as a cost-cutting renewable energy resource that provides significant additional benefits to the health of the fish farm.
