

Are photovoltaic panels considered dangerous goods when exported

Overview

Solar panels are classified as general cargo and are not classified as dangerous goods. This means that during cross - border transportation, they do not require special transportation and storage requirements, whether it is Maritime transport or Air freight is acceptable. For example, any commercial entity or institution (e.) that makes the decision to remove from service and dispose or recycle a solar panel. When most people picture clean energy equipment, "dangerous goods" isn't the first label that springs to mind. But stick with me here because this classification affects everything from shipping costs to installation timelines. See, once these panels get loaded onto a cargo ship or cargo plane. Solar panels need special attention to the following points during transportation to ensure that the goods arrive at the destination safely and smoothly: Take and put lightly: solar panels, especially glass solar panels, belong to fragile products, must be taken and put lightly, avoid rough. Universal waste handlers that accept more than 100 kilograms (or 200 pounds) of PV modules from any offsite source or that generate 5,000 kilograms (or 10,000 pounds) or more of PV modules in the calendar year 2024 shall submit a completed written annual report by February 1 of 2025.
