

Barbados Container How are nickel-cadmium batteries packaged

Overview

Dry cell nickel-cadmium batteries that are higher than 9-volt must be packed so that the terminals do not touch each other. You can put conductive caps on them, bag them individually, place non-conductive. Nickel Cadmium batteries are often used in portable electronics and flashlights. This guide is written to help you ship batteries safely by air. It is not a substitute for the Hazardous Materials Regulations (HMR; 49 CFR Parts 100-185). Every effort has been made to provide a simplified guide consistent with the HMR.
