

# Brazil has Chinese solar container communication station inverters

## Overview

---

Experts have warned that communication devices could evade firewalls and switch inverters off remotely, posing a huge risk to power grids, as they could change settings, damage energy infrastructure, destabilize the grid, and cause widespread blackouts. Although the inverters are designed to allow remote access for updates and maintenance, utilities using Chinese versions usually use firewalls to prevent direct communication with the country. Leading renewable energy operators worldwide are confronting a disturbing supply-chain vulnerability: Rogue communication devices have been discovered in Chinese made solar inverters, devices which play a 'critical role' in renewable energy infrastructure, Reuters reports. This has prompted US energy officials to re-assess the risks of emerging technologies produced in China. Power inverters are. U. The power plant is easily deployed -and The LZY- MSC1 Sliding Solar Container provides 20-200kWp solar power with 100-500kWh battery storage. Deployable in 24 hours for mining, construction, and emergency relief.
