

# Can cook and generate electricity from solar energy

## Overview

---

Photovoltaic (PV) systems convert sunlight into electrical energy, which can then power electric stoves, ovens, or other cooking appliances. In the mid-1700s, a European naturalist named Horace de Saussure built a small device intended to harness the energy of sunlight. Scientists at the time were doing a lot of. Fresnel lens cookers deliver intense heat for quick cooking, while solar kettles and thermoses are perfect for heating water and beverages. Solar cooking utilizes specially designed ovens or reflective panels to concentrate sunlight, generating heat to cook food without fuel or electricity. Photovoltaic (PV) systems.
