

# Can solar power plants be used for energy storage

## Overview

---

Yes, in a residential photovoltaic (PV) system, solar energy can be stored for future use inside of an electric battery bank. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Storage systems turn solar power from a “use it or lose it” resource into a reliable, flexible energy source. Energy storage allows surplus generation to be banked for peak-use. This stored energy can power your home during nighttime, cloudy days, or grid outages. For those looking for a quick understanding: 1.

### Solar Energy Storage Methods: Comprehensive Guide for Renewable Energy

Solar thermal energy storage systems absorb and collect heat from the sun's radiation. The heat is then stored in a thermal reservoir. Later, it can be converted and used as heat or electricity.
