

China s path to solar power

Test certification
CE  FC 

Overview

China's solar market has just completed a dramatic cycle, hitting a new peak in 2025 before a policy shift promises a sharp downturn. The country installed a record 315.3 terawatts by the end of 2026 as China expects 300 GW to come from primarily wind and solar. China's installed solar power capacity is projected to surpass coal-fired capacity for the first time this year, marking a major. Growing power demand in China and the sheer size of the country's market showcased what appeared to be countervailing trends — the persistence of coal, and the rise of renewables. New data from Global Energy Monitor and the Center for Research on Energy and Clean Air found that developers in China. - China's solar market hit a 2025 peak with 315.2 TW and pushing non-fossil power sources past thermal generation for the first time. China's National Energy Administration (NEA) released its 2025 power sector statistics on Jan. It's a stunning visual, but it doesn't even begin to capture the staggering amount of solar power being produced by the People's Republic.

China's path to solar power

How China adds more renewable energy than any other economy

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

How China Fueled the Global Solar Energy Revolution

China's solar ambitions are emblematic of its broader race toward a green energy future, driven in part by Beijing's interest in becoming less reliant on imported oil and natural gas.

Solar power in China

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentives

China is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. By June 2025, China's PV capacity surpassed 1,100 gigawatt. In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative

installed solar capacity.
