

Colin Photovoltaic Grid-connected Inverter

Overview

This reference design implements single-phase inverter (DC/AC) control using a C2000™ microcontroller (MCU). There is a rapid increase in the amount of inverter-based resources (IBRs) on the grid from Solar PV, Wind, and Batteries. It's a device that converts direct current (DC) electricity, which is what a solar panel generates, to alternating current (AC) electricity, which the electrical grid uses. Due to renewable energy's intermittency, it must be stabilized. This is where power electronics devices like converters are crucial in ensuring the proper. This book focuses on a safety issue in terms of leakage current, builds a common-mode voltage analysis model for TLIs at switching frequency scale and develops a new modulation theory referred as “Constant Common-Mode Voltage Modulation” to eliminate the leakage current of TLIs. Transformerless. Most PV systems are grid-tied systems that work in conjunction with the power supplied by the electric company. A grid-tied solar system has a special inverter that can receive power from the grid or send grid-quality AC power to the utility grid when there is an excess of energy from the solar.

This comprehensive review examines grid-connected inverter technologies

- 
Efficient Higher Revenue
 - Max. Efficiency 97.5%
 - Max. PV Input Voltage 600V
 - 150% Peak Output Power
 - 2 MPPT Trackers, 150% DC Input Oversizing
 - Max. PV Input Current 16A, Compatible with High Power Modules
- 
Intelligent Simple O&M
 - IP65 Protection Degree support outdoor installation
 - Smart I-V Curve Diagnosis Function locate PV string faults accurately and automatically detect faults
 - DC & AC Type II SPD, prevent lightning damage
 - Battery Reverse Connection Protection
- 
Flexible Abundant Configuration
 - Plug & Play, EPS Switching Under 30ms
 - Compatible with Lead-acid and Lithium Batteries
 - Max. 6 units Inverters Parallel
 - AFCI Function (Optional) when an arc fault is detected the inverter immediately stops operation
