

# Communication base station AC power distribution

## Overview

---

This acts as the “blood supply” of the base station, ensuring uninterrupted power. It includes: AC distribution box: Distributes mains power and offers surge protection. In a world that demands constant connectivity, telecom power supply systems remain indispensable. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. A power efficient. This article presents a scalable and stackable -48 V DC PoL solution that will address the high density power usage situations created by these high density networks from the tremendous growth in network traffic. Telecom and wireless network systems typically operate on -48 V DC power. High reliability: Multiple backup design to ensure. and downstream of RS485 communication based on MODBUS-RTU protocol. Also, devices like AMC16-DETT, DTSD1352-4S support upstream data further to cloud server using Ethernet upstream communication.

## Communication base station AC power distribution

### Building a Better -48 VDC Power Supply for 5G and Next

Since most telecommunications equipment at the site requires a DC voltage supply, the AC power from either the electric grid or the diesel generator is converted to -48 V DC by the rectifiers.
