

Community Energy Storage System Design

Overview

These systems bridge the gap between large utility-scale storage facilities, which serve the entire transmission grid, and small residential batteries installed behind a single customer's meter. Community ownership of assets is one way to deliver a more equitable distribution of benefits and control in the energy sector. Energy storage in particular can be adopted at the local level due to the flexible and scalable nature of the technology. As a result, with the wider adoption of community. Detroit Edison (DTE) will design, build, and demonstrate Community Energy Storage (CES) systems in their service territory, and two of the CES units will utilize secondary-use electric vehicle batteries.
