

Construction standards for new energy power generation base stations

Overview

The new second edition of Substation Structure Design Guide, Manual of Practice 113, has arrived to help structural designers of outdoor electrical substation structures and foundations, utility engineers, and manufacturers address today's demands and anticipate those to come. NLR provides strategic leadership and technical expertise in the development of standards and codes to improve the integration, interconnection, and interoperability of electric generation and storage technologies. Performance standards are critical to building a clean and modern grid—they. New energy storage station construction standards indicate a significant need for standards. Under this strategic driver, a portion of DOE-funded energy storage research and development (R&D) is directed to actively work with industry to fill energy storage Codes & Standards (C&S) gaps. Visit the Electric Power Generation, Transmission and Distribution Standard Page for information on the final rule. This page is a part of OSHA's commitment to provide employers and workers in the electric power generation, transmission, and distribution industry with information and assistance to. On April 1, the Federal Energy Regulatory Commission (FERC) issued its final rule of Order 845, addressing reform of generator interconnection procedures and agreements for generators of more than 20 megawatts (MW).
