

# **Cuban Photovoltaic Energy Storage Container Earthquake- Resistant Type**

## Overview

---

BESS units store excess energy generated from renewable sources during low-demand periods, providing a stable energy supply when production is low or demand is high, thus enhancing grid stability. On Saturday, Cuba initiated the installation of solar energy storage batteries at four electrical substations, marking a significant step in addressing its energy challenges. These Battery Energy Storage Systems (BESS), also referred to as "concentrator units," are being placed at Cueto 220, Bayamo. The plan aims for one thousand megawatts of solar energy by 2025, but without installed batteries, which prevents meeting nighttime demand and limits its effectiveness against persistent blackouts. This effort, which involves establishing approximately fifty photovoltaic parks across the nation, aims to address Cuba's persistent energy. g gravity, solar, and wind energy storage.
