

Cycle life of Jerusalem cylindrical solar container lithium battery

Overview

In this work, an LCA analysis of an existent lithium-ion battery pack (BP) unit is presented with the aim to increase awareness about its consumption and offering alternative production solutions that are less energy intensive. Cylindrical lithium battery arrangement Cylindrical Li-ion battery cells consist of (i) a jelly roll, a wound composite consisting of a cathode, an anode, and two separators, and (ii) a cell. Many studies have been devoted to this question, and life cycle assessment (LCA) is increasingly acquiring importance in several fields as an effective way to evaluate the energy demand and the emissions associated with products' life cycles. Prismatic cells, on the other hand, offer higher energy density per unit, which suits applications requiring fewer cells like Tesla.
