

# Do ups batteries need charging

## Overview

---

Most UPS batteries need to be charged on a regular basis, typically once every three to six months. However, some newer UPS models are self-charging and do not require manual intervention. To charge a UPS or uninterruptible power supply, you'll need first to plug it into an outlet and then turn on the power. Once it's charged, you can use it to protect your. I notice a lot of the rackmount UPS' battery replacement documentation insists on charging the battery for a full 24 hours prior to putting a load on it, however the documentation also states: + "The Smart-UPS will charge whether it is on or off, and will charge whether there is a load present or. For example, if the battery lasts 30 minutes, it will need approximately 300 minutes to recharge fully. This can lead to: Therefore, it's vital to.
