

# Drilling holes at photovoltaic support construction site

ESS

## Overview

---

Auger drilling is the process of creating holes in the ground to secure the foundation for the solar panel system. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single. Auger drilling has become a popular choice for many solar panel installations due to its numerous benefits. One of the primary benefits of auger drilling is its efficiency. Just. dation using the engineering software program spMats.
