## Overview

---

In 2023, Tonga's electricity consumption has shown a marked reliance on fossil fuels, with over 85% of its electricity derived from these sources. Meanwhile, low-carbon energy, exclusively generated by solar power, contributes approximately 14% to the country's electricity. What is Tonga's average energy consumption per person?

When comparing the total energy consumption of countries, the differences often reflect variations in population size. It's useful to look at differences in energy consumption per capita. This interactive chart shows the average energy. Except where otherwise noted, content on this site is licensed under a Creative Commons Attribution 4. Official and up-to-date data of Tonga for all years of statistics, in an easy-to-read format. Current system is through formal inter-governmental and agency requests from various Data Providers, particularly the Data that is not publically available. The latest value from 2023 is 0. 002 quadrillion Btu, unchanged from 0. In comparison, the world average is 3.
