

# Energy conservation laos

## Overview

---

The Government of Laos is committed to promote an inclusive green growth development agenda that ensures lowered GHG emissions and increased energy efficiency. The Lao PDR NDC to the UNFCCC notes the country's ambitious plans to lower energy consumption and reduce GHG. Promote the EV used and Develop the EV Charging in nationwide Bioenergy promotion We envision harnessing the transformative potential of green hydrogen-ammonia to drive a resilient, just and sustainable Lao PDR energy transition. It represents all the energy required to supply end users in the country. Some of these energy sources are used directly while most are transformed into fuels or. This chapter should be cite as: Phongsavath, A. (2024), 'Renewable Electricity and Energy Transition in Lao PDR: Opportunities for Green Hydrogen and Ammonia', in Phoumin, H. As the country continues to develop, the demand for energy is expected to grow, presenting a significant challenge for Laos in achieving its target of carbon. In 2000, over 95% of Lao People's Democratic Republic's emissions are caused by Land Use Change and Forestry (LUCF) and the agriculture sector. The total emissions were reported to be 50,742.
