Energy storage and power generation

Energy storage solutions to decarbonize electricity through enhanced

To meet ambitious global decarbonization goals, electricity system planning and operations will change fundamentally. With increasing reliance on variable renewable energy ...

Energy storage for electricity generation

An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such as solar-thermal energy) to charge an energy storage system or device, which is discharged to ...

Storage Enables Deep Decarbonization of Electricity Systems
Recognize Tradeoffs Between "Zero" and "Net-Zero" Emissions
Invest in Analytical Resources and Regulatory Agency Staff
Long-Duration Storage Needs Federal Support
Reward Consumers For More Flexible Electricity Use
Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible.
