## Overview

---

This report describes development of an effort to assess Battery Energy Storage System (BESS) performance that the U. Department of Energy (DOE) Federal Energy Management Program (FEMP) and others can employ to evaluate performance of deployed BESS or solar photovoltaic (PV) +BESS systems. ABB can provide support during all. This chapter describes these tests and how they are applied differently at the battery cell and integrated system levels. Traditional off-line studies fall short once you consider microsecond switching events, non-linear battery impedance, and protection logic that must trip. Our Energy Storage Testing instrument (ESTi™), a commercial off-the shelf, PC-based modular battery test solution, offers highly accurate measurements at a fraction of the cost of a custom test system. This system's highly intuitive ESTiView™ drag-and-drop software powers the ESTi platform.
