

# Energy storage for demand response canada

## Overview

---

Electrification and energy storage projects share the common goal of addressing the challenges associated with the changing electrical demand profiles and the provision of clean, resilient, reliable, and affordable electricity for all Canadians. The installed capacity of energy storage larger than 1 MW—and connected to the grid—in Canada may increase from 552 MW at the end of 2024 to 1,149 MW in 2030, based solely on 12 projects currently under construction 1. There are an additional 27 projects with regulatory approval proposed to come. Energy Storage Canada is the only national voice for energy storage in Canada today. Increasing electricity demand to charge electric vehicles, industrial electrification, and the production of hydrogen are just some of the factors that will drive this growth. With the country's target to reach zero-net emissions. Investigating the implications of electrified loads on electric grid expansion, reliability, resilience, and costs in addition to researching the mitigation of these impacts Project location: CanmetENERGY Ottawa, Ottawa, ON.
