

# Energy storage lithium battery BMS maintenance

## Overview

---

To ensure the safe and efficient operation of 215kWh/241kwh/261kwh/1. 2MW lithium battery systems and maximize their service life (which can reach 10 years or more), please follow these maintenance recommendations. Daily & Weekly Checks (Can be done via the monitoring system) Most maintenance tasks. Lithium battery packs are monitored, controlled, and safeguarded by an electronic control unit called a Battery Management System (BMS). It is frequently referred to as a lithium BMS when used with lithium-based systems. The BMS is indispensable because it performs several critical functions, including: Monitors the Battery State: By keeping track of the battery's voltage. A Battery Management System (BMS) is the brain and safety layer of any lithium battery pack. It monitors cells, protects against abuse, balances differences between cells, estimates state of charge/health, and communicates with the rest of the device or vehicle. From residential ESS to commercial and industrial battery cabinets, the BMS serves as the "control brain" of the battery.
