

# Energy storage system communication test

## Overview

---

The objective of this manual is to provide specific, repeatable, detailed test procedures to feed these comparisons with a focus on utility requirements for energy storage. To support consistent characterization of energy storage system (ESS) performance and functionality, EPRI—in concert with numerous utilities, ESS suppliers, integrators, and research organizations participating in the Energy Storage Integration Council (ESIC)—has developed a reference test manual. The system performs functional, performance, and application. This report of the Energy Storage Partnership is prepared by the National Renewable Energy Laboratory (NREL) in collaboration with the World Bank Energy Sector Management Assistance Program (ESMAP), the Faraday Institute, and the Belgian Energy Research Alliance. Commissioning is a gated series of steps in the project implementation process that demonstrates, measures, or records a spectrum of. The Energy Storage System (ESS) Performance Test System is used to evaluate, test, and certify the performance of energy storage systems up to 2MW. The Standard covers a comprehensive review of ESS, including charging and discharging.
