

European solar power price trend

Overview

As European electricity markets absorbed the combined pressures of tight fossil fuel supplies, elevated carbon prices and rising demand in 2025, solar energy played a critical moderating role in limiting the upward trajectory of power prices, industry analysts and market. As European electricity markets absorbed the combined pressures of tight fossil fuel supplies, elevated carbon prices and rising demand in 2025, solar energy played a critical moderating role in limiting the upward trajectory of power prices, industry analysts and market. The updated guide to photovoltaic module prices shows the latest costs of solar panels across Europe. In August, high-efficiency modules dropped to €0. 12 per watt, marking an all-time low for the sector. According to the monthly index. Every month we publish a current price index on the development of wholesale prices of solar modules. While power. With 65. One might argue that this contraction is merely a correction after the extraordinary solar heydays of the energy crisis, when annual growth reached unprecedented double-digit levels. Indeed, the EU met its 320 GWAC (400 GWDC). The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. It includes detailed breakdowns for national average system costs for France, Germany, Italy, Spain and the UK across the three segments.

European solar power price trend

Europe faces surge in negative power prices as solar output grows

Sweden, the Netherlands, Germany, Spain, and France have each logged more than 500 hours of negative electricity prices this year, driven by excess renewable generation and volatile ...
