

Flexible photovoltaic bracket is a new technology

Overview

Flexible photovoltaic brackets have been proposed to replace traditional beam-supported photovoltaic modules. The global solar energy market was valued at approximately \$121.99 billion in 2024 and is projected to surpass \$389 billion by 2030. Through "suspension, tensioning, bracing, and compression," it provides a structural bracket. The new system uses suspension cables to bear the load of photovoltaic modules, and has the characteristics of adapting to complex terrain conditions, small footprint, and strong site adaptability. Flexible PV panels can be easily integrated with infrastructures of various shapes and sizes, meanwhile they are light-weight.

Flexible photovoltaic bracket is a new technology

DAS-Solar-News

Adaptable to various terrains and climates, DAS's flexible bracket boasts three core advantages: high headroom, large spans, and high stability. It effectively addresses challenges in ...
