Overview

If you aren't sure which option would work for you, use our contact form to request a consultation with one of our staff who will recommend the right products. Pictured above is an 800W free-standing solar power system for an oilfield services client. In addition to custom design, we offer a range of standard free-standing kits from 100-1100W. We design and engineer custom Solar Power Systems for Oilfield Services, Gas Pipelines, Off-shore Drilling. In addition to providing solar-powered SCADA and RTU (remote terminal units), we have designed solar power packages that will fulfill the following needs: Pipeline security is imperative, as any loss of function in a gas or oil pipeline or well could mean an immense drop in productivity, as well as. MOBIPOWER containers are purpose-built for projects where energy demands go beyond what a trailer can deliver. These rugged, self-contained systems integrate large solar arrays, advanced battery storage, and high-capacity fuel cells — with optional diesel redundancy when regulatory or client. But now, a new solution is taking over: off-grid solar power systems, especially containerized PV energy solutions. So, why are they gaining ground so fast?

Let's break it down. Diesel Is Expensive and Hard to Maintain Diesel might seem simple, but it's costly — not just in fuel, but in. Our containerized off-grid solar solutions provide customers with a flexible and reliable way to access clean and renewable energy in remote locations or areas without reliable access to the grid. More importantly, it powers critical applications like SCADA and telemetry, making it both cost-effective and dependable. As a result, solar energy has become the preferred source for.
