

Hexing Group Solar Power Generation Project

Overview

Hexing has officially signed an agreement with De-Janees Concepts Ltd to jointly launch a 2 MW solar-powered medium-voltage microgrid project with 3 MWh of energy storage in Saki, Oyo State, Nigeria, with plans to scale up to 10 MW in the future. The CampusGrid project covers an area of 144,000 m² and has received an investment of R\$ 45. 3 million as part of the R&D program by Aneel, in partnership with CPFL Energia and other institutions. The initiative will save R\$ 450,000 per year in energy costs for Unicamp. Part of a broader R&D initiative by the company, supported by ANEEL (National Electric Energy Agency), Saki, a community in the Oke-Ogun area of Oyo State, is set to enjoy a minimum of 22 hours of electricity supply daily following the official signing of a 10-megawatt interconnected solar-hybrid power project between De-Janees Concept Limited and Hexing Electrical Company Limited. The investment will support the opening of a new office in Nairobi, which aims to capitalize on the growing smart metering market. At its smart metering factory in Romania, Hexing Europe has successfully implemented a solar energy system utilizing LIVOLTEK products, significantly reducing its environmental impact and operational costs. The solar installation features: 5 Grid-Tied Inverters (GT3 - 50KW) 608 Solar Panels (550).
