

How big a solar panel should I use to charge a 9 volt battery

Overview

For charging a 9V battery, a solar panel in the range of 5W to 20W is ideal.

Determine Battery Capacity: Match the solar panel size to your battery's capacity, typically measured in amp-hours (Ah), to ensure effective charging.

Assess Daily Energy Needs: Calculate the total wattage of devices you intend to power to choose a solar panel that meets or exceeds this daily. Use our solar panel size calculator to find out what size solar panel you need to charge your battery in desired time. Optional: If left blank, we'll use a default value of 50% DoD for lead acid batteries and 100% DoD for lithium batteries.
