

# How big of a DC inverter do I need for a 100W AC

## Overview

---

For a 100-watt solar panel, the ideal inverter size is within the 300 to 600-watt range, specifically a 12V DC to 220V AC model. This is crucial because the inverter serves as the backbone of your solar energy system, converting Direct Current (DC) from the solar panel into. Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home—it just converts whatever your panels generate. With this system you can. Learning how to calculate inverter size for your needs can be a tricky task, especially if you're unfamiliar with how an inverter works or how much power you need to produce. Inverters are useful pieces of equipment, but you're likely to have questions about the necessary equipment in order to make.

## Perfectly Size Your Inverter for Peak Output

Take your loss-adjusted wattage and divide by 1.15 for minimum inverter size. Using our example:  $6.4\text{kW} \div 1.15 =$

5.6kW minimum. Inverters come in standard sizes like 3kW, 5kW, 6kW, ...
