

How do photovoltaic panels damage the panels

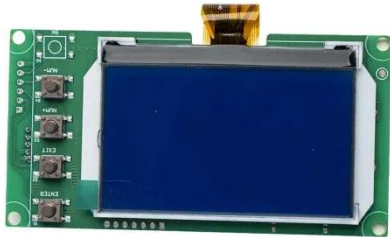

Overview

Solar Cells: Photovoltaic (PV) cells are the heart of any panel, converting sunlight into direct current (DC) electricity. Over time, solar cells can crack or become discolored, especially due to UV exposure or heat stress, both leading causes of solar panel defects. Solar panels are a reliable and sustainable way to harness solar energy for your home or business. But like any other technology, they are not immune to wear, environmental impacts, or improper maintenance. Even with careful upkeep, failures happen and solar panels break. How do Solar Panels Get Damaged?

External conditions like bad weather, storms, extreme heat, rain, etc.

How do photovoltaic panels damage the panels

How do solar panels get damaged?

Solar panels can get damaged from a variety of causes such as weather conditions, physical damage from animals or falling debris, manufacturing defects, and lack of maintenance.
