Overview

Standard Voltage: Most residential solar panels produce between 30 to 40 volts under standard test conditions (STC). This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the. The formula to calculate the total voltage of a series-connected solar panel array incorporates the count of panels and the voltage per panel. Solar panel voltage, V_{sp} (V) in volts equals the product of total number of cells, C and voltage per cells, V_{pc} (V) in volts. Fields #6 and #12 are for how many hours you expect your equipment to run in a 24 hour period, and your input voltage (12, 24, 36?

). In #14, insert days of backup you would like your battery pack to be good for.
