

# How many years is the life of a wind turbine generator

## Overview

---

On average, a modern wind turbine generator lasts between 20 and 25 years, but this can vary widely depending on several technical and environmental factors. With most wind turbines being installed in the last decade, it is largely unknown if they will make it to the designed 20-25 year life. This duration aligns with initial investment recovery plans and. There is no evidence that wind turbine generators have a lifespan of only three or four years.
