

# How much area does a photovoltaic panel occupy

## Overview

---

A typical home solar panel is about 3 feet wide by 5.5 feet long, occupying an area of roughly 17 square feet. When looking into a system for your home, the amount of space required per kW solar panel?

The area required for each kilowatt (kW) solar panel system is approximately 5 to 10 square meters, depending on the panel efficiency and wattage. Tip: Gross area = Net module area × Layout factor (accounts for row spacing, walkways, setbacks).
