

How to adjust the photovoltaic panel if it is tilted

Overview

Latitude = Tilt: The general rule is to set your panel tilt equal to your latitude for year-round performance. Seasonal Adjustment = Bonus Output: Adding 10–20° adjustments in summer and winter can increase annual production by 20–25%. A correctly tilted system can improve efficiency by 5–10% annually, reducing payback time and boosting long-term savings. In this guide, we'll break down the science behind the best solar panel angle, explain how to calculate it based on latitude, show seasonal adjustments, and share. The panel must face south in the Northern Hemisphere and north in the Southern Hemisphere. The further you are from the Equator, the more vertical the panel must be. Seasonal changes affect optimal angles, 3. These two angles determine how directly your panels face the sun, which affects how much sunlight they can capture—and in turn, how much electricity they produce.
