

# How to calculate the length of photovoltaic support piles

## Overview

---

Below is a step-by-step guide to determine the appropriate pile length for your project. Determine the Design Load The first step is determining the specific load (dead load, live load, or both) that the pile must support. The feature called "Pile generator" will be located in the section of Ground Mount in your VirtoCAD ribbon. When selecting it, a pop-up window will appear where you. This calculation depends on several factors, including load requirements, soil properties, and the type of pile used. The study confirms the reliability of the PHC pile foundation as a support structure for heliostats, aiming to offer valuable insights for practical a voltaic modules, wind, snow, earthquakes and other loads. ed in a semi-circular area with a radius. Accurate determination of pile length is essential to ensure the structural integrity and stability of the foundation.

## How to calculate the length of photovoltaic support piles
