

# How to check if solar power generation is normal

## Overview

---

Just open your solar monitoring app or take a look at your inverter's display. If it is, you can rest easy knowing your system is up and running. Evaluating the inverter status ensures that the converter is operating efficiently and processing the generated electricity correctly. This guide covers various testing methodologies, from simple. How to tell if solar panels are working?

It's a crucial question because an underperforming system can mean higher energy costs and lost savings. Factors like poor maintenance, weather conditions, or system malfunctions can silently reduce efficiency, costing you money without you even realizing. The green checkmark to the left of your system name indicates normal system production and displays when there is electrical generation during standard sunlight conditions for your location.
