

How to configure the power supply of the solar telecom integrated cabinet

Overview

MPPT+solar Module combos maximize energy extraction by continuously adjusting to sunlight and temperature changes, ensuring reliable power for telecom cabinets. Reliable power supply remains critical for telecom cabinets, especially in environments with fluctuating load demands. Variable load conditions often lead to increased heat generation, causing thermal stress and raising risks of equipment failure. Different devices have different power needs, so it's essential to ensure that the power cabinet can provide the right amount of power at the right voltage. For example, some routers might require a stable 48V DC. The communication base station installs solar panels outdoors, and adds MPPT solar controllers and other equipment in the computer room. The power generated by solar energy is used by the DC load of the base station computer room, and the insufficient power is supplemented by energy storage. During the installation of this product, you will be exposed to wires from the Solar PhotoVoltaic (PV) panel array which are energized with high voltage. The high voltage is present during all daylight hours.

How to configure the power supply of the solar telecom integrated

How to Integrate ESTEL Solar Power Systems into Telecom Networks

Telecom solar power systems offer a sustainable alternative to traditional energy sources, reducing environmental impact while optimizing performance. Using ESTEL solar power systems ...

TAX FREE 

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

ENERGY STORAGE SYSTEM
