

How to fix a solar powered light that doesn't light up

Overview

Most solar light failures are caused by dirty panels, dead batteries, or water damage. For persistent issues, reset sensors or check wiring connections. As with any other light fixture, solar lights can get broken or start malfunctioning, so you need to know how to fix them if there's a problem. The lifespan of solar lights' rechargeable batteries is typically 300-500 charges, and a decrease in light duration can indicate it's time to replace them. In this video, we'll show how to open, diagnose the problem, and repair a sealed solar light that won't light up. Whether you've added them to your garden path, backyard, or driveway, they're meant to work quietly in the background.
