

# How to solder the wires between photovoltaic panels

## Overview

---

Here's a practical example of how to solder wires to a solar panel: Strip the Wires: Remove about 1/4 inch of insulation from the ends of the wires you want to connect. Tin the Wires: Heat the wire ends with the soldering iron and apply a small amount of solder to coat them. Soldering is the process of joining two or more electronic components together using a filler metal, typically a lead-tin alloy. In the context of solar panels, this means securely connecting the photovoltaic cells to the wiring that will ultimately deliver that precious solar energy to your home. How to Solder Solar Cells Together: As the title says this instructable demonstrates how to solder individual solar cells together in preparation for building a solar panel. First i need to give a few disclaimers: 1. The cable is flexible yet moisture-resistant, Ozone, UV, and flame resistant.
