

# **Ice Photovoltaic New Energy Storage**

## Overview

---

IceBrick tackles energy storage and cooling in one system. The customizable units, shown in the clip on a commercial building's roof, can freeze water in numerous cells during prime solar -energy production hours. The company's flagship product, the Ice Bear, transforms traditional air conditioning systems by freezing water during off-peak electricity hours and. Support CleanTechnica's work through a Substack subscription or on Stripe. Ice-based thermal energy storage systems have a long history dating back to the zero emission, pre-electric days of the ice house. Carbon emissions entered the mix when people figured out how to deploy electricity to turn. Israel-based Nostromo has developed an IceBrick energy storage system that its experts said can cool buildings more cleanly and at lower cost than traditional air conditioners.
