

# Icelandic Power Base Station Publicity Network

## Overview

---

Landsnet has initiated construction of a new 220 kV ring network around Iceland, which will enhance transmission capacity to about 600 MW across key regions and boost security limits from 130 MW to 210-250 MW. This will optimise the use of existing power and accommodate growing. Our vision is a sustainable world, powered by renewable energy. Our role is to maximize the value of the renewable energy resources we have been entrusted with, in a sustainable and efficient manner. We operate fourteen hydropower stations in four operational areas across Iceland. The Landsnet's transmission system - 'the grid' - carries electricity from generation companies to utilities and power-intensive industries.

 Connection to the rest of Europe  
 Production and Consumption  
 Transmission  
 Distribution  
 Competition

There are plans to connect the Icelandic grid with the UK using a subsea High-Voltage DC (HVDC) interconnector, with a potential capacity of up to 1.2GW, called Icelink. It would be the world's longest submarine HVDC cable, if built. This would allow Iceland to export

excess energy to UK and in turn linking it to a wider European super grid. The project is in planning stages and is controversial in Iceland due to fears of increased ...
