

# Inventing solar power

## Overview

---

Solar power was first discovered by French physicist Edmond Becquerel in 1839 at the young age of 19. At the time, Becquerel was experimenting in his father's lab when he observed the photovoltaic effect, a process that generates electricity when exposed to sunlight. Long before the first Earth Day was celebrated on Ap, generating awareness about the environment and support for environmental protection, scientists were making the first discoveries in solar energy. His process involved placing. Today's rooftop installations trace their lineage through brilliant inventors, accidental discoveries, and Cold War space races—transforming sunlight into the clean electricity that powers millions of homes. The word “Photovoltaic” takes us to the beginning of solar history: “Photo” meaning light and “Voltaic” meaning electricity. Berzelius and Gottlieb Gahn were trying out a method of preparing. From powering homes to driving spacecraft, solar panels have become a cornerstone of renewable energy. But have you ever wondered who invented solar panels or how they evolved into the efficient tools we rely on today?

The history of solar energy is a captivating story of discovery, innovation, and. Before the first modern solar panels were invented by Bell Laboratories in 1954, the history of solar energy was one of fits and starts, driven by individual inventors and scientists. Then the space and defense industries recognized its value, and by the late 20th century, solar energy had emerged.
