

# Is Xiangtongbao etc powered by solar energy

## Overview

---

In 2021, they diversified by investing in solar energy — signing a contract to mount some 40 panels on their roof to feed energy to the grid. China has constructed an enormous solar farm complex on the Tibetan Plateau which is currently around seven times the size of Manhattan. According to The New York Times, the facility is intended to reach about 10 times the size of Manhattan in three years as Beijing makes a concerted push for green.

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, simultaneously generating electricity while making exemplary contributions to poverty alleviation and ecological. China currently holds the largest solar power capacity share in the world, having brought about 40 gigawatts (GW) into operation in 2020, taking its total installed solar capacity to 240GW. The country's total solar capacity has increased more than fivefold since 2015 and could double in the next. Workers cleaning solar panels work on the rooftop of the factory of energy equipment manufacture Iraeta on the outskirts of Jinan in eastern China's Shandong province on Ma. Developed independently by DEC, the. As the world's largest CO 2 emitter, China's efforts to decarbonize its energy system will be critical to the goal of limiting the rise in global average surface temperature to 1.
