

# Is it good to use PP board to make photovoltaic equipment

## Overview

---

Low density, easy to weld and process, has excellent chemical resistance, heat resistance and impact resistance, non-toxic, tasteless, and is one of the most environmentally friendly boards at present. Its called PP Board/PP Hollow/PP Corrugated Sheet. Your stock bus bars will be too short with anything that thick. The thickness is only about 3mm or less. Might be handy to have an insulated. Lightweight: Polypropylene sheets are exceptionally lightweight, making them easy to handle, transport, and install. Below is a detailed overview of their characteristics, PP boards exhibit the following exceptional features: Lightweight and Uniform Thickness: Facilitates easy handling. PP board, also known as polypropylene (PP) board (PP pure board, modified PP board, reinforced PP board, PP welding rod), is a semi-crystalline material. It is harder and has a higher melting point than PE. One of the biggest benefits of using hollow soffit boards is their cost-effective nature, they use less.
