

# Is it safe to install photovoltaic panels on colored steel roofs

## Overview

---

The short answer is yes — it's possible to install solar panels on metal roofs. In fact, strong and durable metal roofs are often considered ideal for solar panel installations because they can easily be engineered to support the weight of solar panels and their mounting systems. This guide will walk you through everything you need to know about this powerful combination. Why trust EnergySage?

Metal roofs are light, durable, and often made of eco-friendly recycled materials. Combined with solar panels, they create a highly energy-efficient system that maximizes clean energy. The short answer is yes — metal roofing is one of the best surfaces for photovoltaic (PV) systems due to durability, longevity, and mounting versatility. Asphalt roof shingles have a design life of 12 to 20 years, whereas metal roofs can last 40 to 70 years and are highly durable.
