

# Is there any pressure on uninterrupted power supply for communication base stations

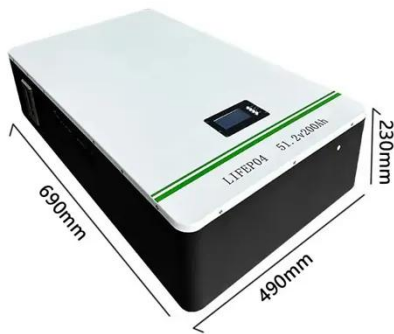

## Overview

---

Many remote areas lack access to traditional power grids, yet base stations require 24/7 uninterrupted power supply to maintain stable communication services. This article clarifies what communication batteries truly mean in the context of telecom base stations, why these applications have unique requirements, and which battery technologies are suitable for reliable operations. Without them, communication services would falter during power outages or fluctuations. Whether it's enabling mobile connectivity, supporting emergency response systems, or providing data transmission in remote areas, these installations must operate. Quick Switch: The Power Supply Management System (PSMS) automatically detects the outage and activates backup supply.
