

# Jakarta energy storage for renewable energy

## Overview

---

Jakarta's recent tender for energy storage solutions highlights Indonesia's push toward renewable energy adoption. With a growing demand for stable power grids and sustainable infrastructure, this project aims to address the challenges of solar and wind energy intermittency. Singaporean renewable energy developer Aslan Energy Capital has penned a new deal with Indonesia's Jakarta Industrial Estate Pulogadung (JIEP) to develop a 40MW data centre with a 120MWh battery energy storage system (BESS). The facility is expected to be operational by the fourth quarter of 2027. Image by: Aslan Energy Capital. The tender targets both. Jakarta Industrial Estate Pulogadung (JIEP) and Aslan Energy Capital (AEC), a Singapore-based clean energy infrastructure developer, have inked a legally binding Heads of Agreement (HoA) for the construction of the Aslan Jakarta Data Centre (AJDC), a cutting-edge, 40 megawatt hyperscale co-location. Energy storage technology isn't just an option anymore - it's becoming Jakarta's lifeline for sustainable development. Jakarta's unique challenges create what experts call the "triple squeeze": Traditional solutions like diesel generators?

They're sort of Band-Aid fixes that worsen air quality.
