

# Lebanon exports the most solar modules

## Overview

---

In 2022, Lebanon imported 80,315 tons of solar panels, quadrupling the total imported in the previous decade, with over US\$500 million invested by the private sector in decentralized solar applications (Boukather, 2023). Since its energy and financial systems collapsed in 2019–21, Lebanon has experienced a rapid solar boom—with solar production increasing tenfold in just a few years—that has profoundly altered and decentralized the country's energy system. This boom has seemingly plateaued, but with a new. It was once a gold rush, spurred by the country's electricity crisis. But now it's at a plateau, and business owners are shifting focus. Solar panels set up on rooftops overlooking Beirut International Airport in Aramoun, south of Beirut, Jan. For an entrepreneur considering entry into the solar industry, understanding this dynamic is crucial. According to the State-affiliated Lebanese Center for Energy Conservation (LCEC), private installations in businesses and homes since 2020 have added 350MW of renewable power — about 5-7% of.
