

Lightning-protected maintenance services for server racks used in microgrids

Overview

We provide comprehensive maintenance and inspection plans to ensure the ongoing effectiveness of your lightning protection systems. The US experiences approximately 25 million cloud-to-ground lightning strikes annually. Lightning strikes pose a significant risk to infrastructure and equipment. Onsite microgrids, which are self-sufficient energy systems that can operate independently from the main grid, have emerged as an essential, and increasingly popular solution. When implemented with best-in-class maintenance strategies, microgrids can enhance uptime, optimize energy use and provide. Within our range of Smart Earthing products and services, we offer the professional service Earthing system projects for engineering and architectural firms. Here we combine our technical team of experts with the most advanced IT tools to tackle any earthing project. Our lightning protection system for server racks is designed to safeguard your valuable equipment from the damaging effects of lightning strikes.

Lightning-protected maintenance services for server racks used in

Lightning Protection System Inspection & Maintenance

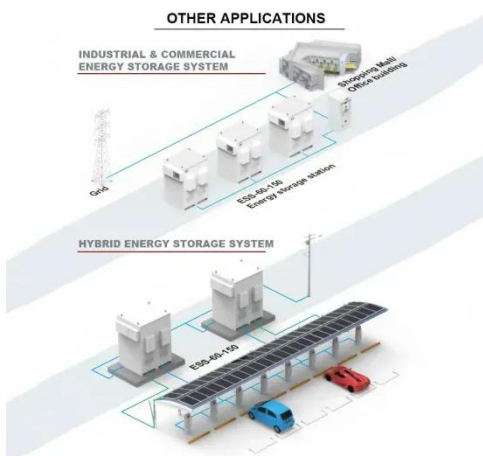

Protection should be verified prior to changes being made and adjustments done at time of commissioning. All conductors and system components remain securely fastened to their mounting ...
